

ROHITH KODAPAKA

Splunk Administrator | Splunk Developer | SIEM Engineer

Hyderabad, India | +91-9493131763 | rohith.k0796@gmail.com

PROFESSIONAL SUMMARY

Splunk Administrator and SIEM Engineer with 5+ years of IT experience and strong hands-on expertise in Splunk Enterprise, Splunk Enterprise Security (ES), Splunk Administration, SPL Development, SIEM Operations, and Security Monitoring.

Experienced in managing the complete Splunk platform lifecycle, including installation, configuration, deployment, upgrades, migration, clustering, backup and restore, monitoring, troubleshooting, and performance optimization across distributed environments.

Strong administration experience with Indexers, Search Heads, Indexer Clusters, Search Head Clusters, Deployment Server, Universal Forwarders (UF), and Heavy Forwarders (HF). Skilled in index management, data retention, data routing, user and role administration, application management, licensing, configuration management, and Splunk platform health monitoring.

Hands-on experience in SPL development, dashboards, alerts, reports, saved searches, correlation searches, knowledge objects, lookups, KV Store, macros, event types, tags, field extractions, calculated fields, and data models.

Experienced in security log onboarding, CIM mapping, data normalization, threat detection, security monitoring, and SIEM use cases using Syslog, HEC, TCP/UDP, file monitoring, and DB Connect.

Strong troubleshooting skills across data ingestion, UF/HF connectivity, parsing, indexing, search performance, cluster health, missing/delayed events, duplicate events, configuration issues, and Splunk service failures. Working knowledge of Linux, Windows, AWS, and GCP environments.

CORE COMPETENCIES

Splunk Enterprise Administration | Splunk Enterprise Security (ES) | Splunk SIEM & Security Monitoring | Distributed Splunk Architecture | Indexer & Search Head Administration | Indexer Clustering | Search Head Clustering | Deployment Server Administration | Universal & Heavy Forwarders | Splunk Installation & Upgrades | Splunk Migration & Backup/Restore | SPL Development & Optimization | Security Log Onboarding | CIM & Data Models | Dashboards, Reports & Alerts | Correlation Searches | Knowledge Objects | Monitoring Console (DMC) | Performance Tuning | Incident Troubleshooting | Data Parsing & Routing | Linux & Windows Administration | AWS & GCP

PROFESSIONAL EXPERIENCE

Wipro — Hyderabad, India

Oct 2024 - Present

Splunk Developer / SIEM Engineer

Project: SIEM & Security Log Management

- Administer and support Splunk Enterprise and Splunk Enterprise Security (ES) in distributed enterprise environments.
- Manage and maintain Search Heads, Indexers, Indexer Clusters, Search Head Clusters, Deployment Server, Universal Forwarders, and Heavy Forwarders.
- Perform Splunk installation, configuration, upgrades, migration, deployment, backup/restore, and platform maintenance.
- Administer indexes, index retention, data routing, users, roles, licenses, applications, and Splunk configurations.
- Configure and troubleshoot key Splunk configuration files including inputs.conf, outputs.conf, props.conf, transforms.conf, server.conf, and serverclass.conf.
- Manage forwarder configurations and distribute applications and configuration packages through Deployment Server.
- Troubleshoot Universal Forwarder and Heavy Forwarder connectivity, forwarding, ingestion, parsing, indexing, and search-related issues.
- Monitor Indexer Cluster and Search Head Cluster health, investigate cluster-related issues, and perform operational health checks.

- Onboard security, infrastructure, application, and system logs using Syslog, HTTP Event Collector (HEC), TCP/UDP, file monitoring, and DB Connect.
- Develop and optimize SPL searches for security monitoring, operational monitoring, troubleshooting, reporting, and investigations.
- Create and maintain Splunk dashboards, alerts, reports, saved searches, and correlation searches.
- Develop and manage Splunk knowledge objects including event types, tags, macros, field extractions, calculated fields, lookups, and saved searches.
- Configure and maintain CSV lookups and KV Store-based solutions for application and security use cases.
- Support Splunk ES security monitoring, threat detection, correlation searches, notable-event generation, and SIEM use cases.
- Assist with CIM mapping, data normalization, data model implementation, and security analytics.
- Monitor Splunk platform health and performance using Monitoring Console (DMC).
- Perform SPL optimization, search optimization, workload analysis, and performance tuning.
- Investigate missing, delayed, duplicate, incomplete, or incorrectly parsed events and implement corrective actions.
- Troubleshoot indexing delays, ingestion failures, parsing problems, search failures, and Splunk service issues.
- Support Splunk application installation, configuration, testing, and deployment across development, testing, and production environments.
- Collaborate with SOC, security, infrastructure, application, and development teams to onboard data and implement SIEM solutions.
- Maintain technical documentation, configuration records, deployment procedures, troubleshooting guides, and operational runbooks.

LTIMindtree — Hyderabad, India

July 2022 – Sep 2024

Splunk Administrator

Project: Enterprise Splunk Administration

- Administered and supported Splunk Enterprise across distributed enterprise environments.
- Managed Search Heads, Indexers, Indexer Clusters, Search Head Clusters, Deployment Server, Universal Forwarders, and Heavy Forwarders.
- Performed Splunk installation, configuration, upgrades, migration, deployment, maintenance, and troubleshooting.
- Managed indexes, data retention, data routing, users, roles, applications, licenses, and platform configurations.
- Configured and maintained inputs.conf, outputs.conf, props.conf, transforms.conf, server.conf, and serverclass.conf.
- Managed forwarder configurations and application deployments using Splunk Deployment Server.
- Supported UF/HF deployment, configuration, connectivity, data forwarding, and troubleshooting.
- Monitored and supported Indexer Cluster and Search Head Cluster environments.
- Performed Splunk backup and restore activities and supported platform migration requirements.
- Onboarded application, infrastructure, operating-system, and security logs through Syslog, HEC, TCP/UDP, file monitoring, and DB Connect.
- Developed SPL searches for operational monitoring, troubleshooting, reporting, and security investigations.
- Created and maintained dashboards, alerts, reports, saved searches, and correlation searches.
- Developed and maintained Splunk knowledge objects including lookups, event types, tags, macros, field extractions, and calculated fields.
- Supported CSV lookups and KV Store-based use cases.
- Assisted with Splunk application installation, configuration, testing, and deployment.
- Supported Splunk development activities including SPL development, dashboard creation, search optimization, and operational monitoring solutions.
- Supported Splunk ES and SIEM monitoring requirements.
- Assisted with CIM mapping, data normalization, and data model-based analytics.
- Monitored Splunk platform health using Monitoring Console/DMC.
- Troubleshot missing data, forwarding failures, parsing issues, indexing problems, search failures, cluster issues, and Splunk service failures.

- Performed search optimization and Splunk performance tuning to improve platform stability and search efficiency.
- Collaborated with infrastructure, application, security, and development teams to resolve Splunk incidents and requirements.

HALLMARK GLOBAL TECHNOLOGIES — Hyderabad, India

Sep 2021 – June 2022

System Administrator

- Performed day-to-day Linux and Windows server administration and monitoring.
- Monitored system health, CPU, memory, disk utilization, services, and system availability.
- Performed basic user, group, permission, process, service, and file system administration.
- Investigated system alerts and infrastructure-related incidents.
- Supported application and infrastructure teams in troubleshooting server-level issues.
- Monitored system logs and assisted in identifying operational and application-related issues.
- Supported routine server maintenance, patching, configuration changes, and health checks.
- Assisted with incident resolution and maintained operational documentation.
- Provided infrastructure support that contributed to Splunk data collection, forwarder connectivity, and log monitoring.

TECHNICAL SKILLS

Splunk Administration: Splunk Enterprise, Splunk Enterprise Security (ES), Distributed Architecture, Indexers, Search Heads, Indexer Clusters, Search Head Clusters, Deployment Server, Universal Forwarders, Heavy Forwarders, Monitoring Console (DMC)

Splunk Platform Management: Installation, Configuration, Upgrades, Migration, Deployment, Index Management, Data Retention, Data Routing, License Management, User & Role Management, Application Management, Backup & Restore, Cluster Administration, Health Monitoring, Performance Tuning

Splunk Development: SPL, Search Optimization, Dashboards, Alerts, Reports, Saved Searches, Correlation Searches, Knowledge Objects, Macros, Event Types, Tags, Field Extractions, Calculated Fields, Lookups, KV Store, Data Models

Data Onboarding & Integration: Syslog, HTTP Event Collector (HEC), TCP/UDP, File Monitoring, DB Connect, Data Onboarding, Data Parsing, Data Routing, Field Extraction, Data Normalization, CIM

Splunk Security / SIEM: Splunk ES, SIEM Operations, Security Monitoring, Threat Detection, Correlation Searches, Security Use Cases, SOC Operations, Notable Events, CIM, Data Models

Configuration Files: inputs.conf, outputs.conf, props.conf, transforms.conf, server.conf, serverclass.conf

Operating Systems & Cloud: Linux, Windows, AWS (Basic), GCP

EDUCATION

Bachelor of Science (B.Sc.) – Multimedia
